Abstract

The object of this study is to evaluate the reasons for conflicts occurring in school according to perceptions and views of teachers and resolution strategies used for conflicts and to build a model based on the results obtained. In the research, explanatory design including quantitative and qualitative methods has been used. The quantitative part of the research has been designed as the relational quantitative model. Data have been collected from 216 teachers working in the province of Sivas through the Scale of Reasons for Conflicts and the Scale of Resolution Strategies. The qualitative part of the research has been conducted in conformity with the case study design. Data has been gathered from 20 teachers working in the province of Sivas through open-ended questions. According to the research findings, the reasons for conflicts occurring in school has been diversified based on the way of doing things, individual differences and school management. The strategies for conflict solution used by the teachers vary according to school shareholders in which they experience conflict. Furthermore, findings have been obtained regarding that there is not any common management policy in the school. In this context, "Management Model for Conflict in School" for building conflict management culture in the school has been made.

Keywords: conflict, conflict management, conflict resolution strategies, teachers, mixed design

1. Introduction

The origin of conflict concept is equivalent to the history of humanity. The occurrence of conflicts in every environment in which human is present appears to us as normal. The subject of the conflict, especially starting from 1970's has been the center of attraction of organizational life particularly in the USA and the world. Even, one of the results that makes people sad and the other one that causes workforce losses and time loss of the organizations has led to countries to establish organizations and has led the organizations to attend actively to training in order to minimize these problems (Dağlı & Sığrı, 2014).

When the word of conflict is heard for the first time, it comes to mind the concepts such as furiousness, fear, tension, anger, disappointment, distrust, hostility, damage, destruction, discussion. This fact shows that the idea of conflict or discussion evokes negative thoughts. Despite this fact, people perceive from conflict positive things such as an opportunity for personal development, intellectual revolt, excitement, encouragement (Stulberg, 1987; Tjosvold, 1991; Seval, 2006). On the other hand, conflict is part of the daily life and it is inevitable. Conflict will continue as long as there are differences in values, beliefs, cultures of people and groups. In this regard, conflict can be defined as divergence naturally occurring in the life (Sarpkaya, 2002; Karip, 2003; Stepsis, 2003; Fritz, Brown, Lunde, & Banset, 1999; Walton, 1987; O'Toole, 1999; Steed, 1985; Laursen & Hafen, 2010; Lipsky, Seeber, & Fintzen, 2003; Özmen & Aküzüm, 2010; Öztaş & Akın, 2009).

Conflict is an important part of thinking, watching, performing and managing in an organization (Tjosvold, 1991). In this context, it has been known that conflict is an organizational reality and in there are the people who lead up to the conflict and have different characters, understandings, value judgment, world-view, objectives, attitudes, beliefs, personalities, roles communication skills and interests every organization (Atay, 2001; Parker & Stone, 2003; Seval, 2006; Demir, 2010; Ceylan, Ergün, & Alpkan, 2011). These conflicts and divergences cause various conflicts in the social and organizational life (Akgün, Yıldız, & Çelik, 2009; Zia & Syed, 2013; Quinn, Faerman, Thompson, & Mcgrath, 2003; Yıldızoğlu & Burgaz, 2014). These conflicts increase much when the works intersect, become complex and ambiguous and it is supposed to work for long hours (Sayles, 1993; O'Toole, 1999). Thus, conflict is one the most important and the most urgent subjects that are required to

be discussed (Sharma, 2014). However, it has been seen that the individuals try to manage in the direction of certain behavior models in the conflicts experienced (Toytok & Açıkgöz, 2013).

Conflict management is an old fact as common life (Tjosvold, 1991) and in our day it plays a crucial role in terms of forming a good work environment (Mayer, 1990; Sharma, 2014). In an effective conflict management, it is required to identify properly the source of conflict (Sökmen & Yazıcıoğlu, 2005) and to analyze the reasons for it correctly (Ceylan, Ergün, & Alpan, 2011). Therefore, it may harm organization's structure if it is not managed well in the short and long term. If the conflict is managed correctly, it provides benefits in the long term to all the related parts and organization (Zia & Syed, 2013; Seval, 2006; Karip, 2003; Özmen & Aküzüm, 2010). For this reason, it is necessary to manage the conflicts and divergences constructively, positively and in the manner that it integrates the conflicting parties and enhances the relations as far as possible (Türnüklü, 2005). Thus, people get encouraged concerning the development of values, behaviors, knowledge and civil standards (Johnson & Johnson, 1996). Along with the comprehension of the contributions of conflict management to organizational life, perceptions for management concept has significantly got changed recently. Conflict perception has changed towards listening to others, negotiate with the others, comprehension of cultural differences and skill of value adding instead of exercising power over and struggle with them (Prause & Mujtaba, 2015).

When strategies of conflict resolution are mentioned, it comes to mind firstly the classification which was made by Rahim (1983) through benefiting from (1976) Conflict Management Model of Ruble and Thomas (1976). In this classification, the strategies of the conflict solution are divided into five strategies including integration, reconciliation, compromise, avoidance and domination. These can be defined as: The integration is worrying both about himself/herself and both the other party and making efforts to solve the problem in case of conflict; reconciliation is reaching a decision which is seen as reasonable by the conflicting parties through making sacrifices from their objectives; compromise is that one of the conflicting parts gives up some of his/her claims in order to satisfy the other party's claims and expectations, Domination is ignoring the other party's feelings, opinions and expectations and trying to reach his/her objective. According to Conerly and Tripathi (2004), no one can manage conflicts in the same way. Every conflict style has strong and weak parts and individuals can use all styles in any level. In order to adapt to different situations, it is necessary to use different strategies. In a conflict, individuals may feel strong for the realization of the objectives. However, in another conflict they may maintain the relations and cooperation in accordance with the objectives.

The scholar organizations of which fundamental input is human and in which human interaction is experienced intensely are living organisms. One of the most important factor providing development of the schools is conflict (Tjosvold, 1997; Nural, Ada, & Çolak, 2012; Yıldızoğlu & Burgaz, 2014; Özmen, Aküzüm, & Aküzüm, 2011). The conflict is an important fact that is required to describe in conformity with the skill of adaptation to economic, political and social changes arising from the environment in the schools providing general education (Voronin, 1995). Both the objectives of the schools and the unique conditions stemming from the quality and quantity of human dimension (educators, students, families) lead to organizational studies. In other words, the occurrence of conflicts frequently in schools is a normal case (İnandı, Tunç, & Gündüz, 2013; Miller & Leyden, 1999). Nowadays, conflicts experienced in schools have become more complex depending on the needs of the new generation (Vasilescu, Popescu, & Popescu, 2012). In fact, conflicts experienced in schools along with ethnical origin, socio-economic status, gender roles, technological developments may arise from the increase of tendency to violence among the students (LaCour & Tissington, 2011). Cohen (2005) examines the conflicts experienced in schools in 4 steps. In the first step, conflict prevention, in the second step conflict management, in the third step with the support of the third party and in the fourth step the suspension includes cessation of destructive conflicts through arbitration.

When the literature examined, it is seen that it was expected from school management to resolve conflicts experienced in school. In this context, it is expected from school managers Arslantaş and Özkan (2012) to be sensitive to concerns and needs of the teachers and other workers in the school; Kırçan and Bostancı (2012) to see every conflict as a opportunity if necessary, and to select and practice the most convenient strategy for conflict management according to the problem experienced and to implement the results in accordance with the school's objectives; Yıldızoğlu and Burgaz (2014) to have information about the workers' personality characters; Açıkalın (1998) to establish a system for information (getting information) which operates well in the school; Özgan (2011) to gain trust of the teachers. However, it is not true to see the conflict management as if the responsibility only belongs to the school management. Such a comprehension that the conflicts experienced in the schools cannot be resolved without the intervention of the school management and this comprehension will also passives the other school shareholders concerning this subject. In this regard, it is necessary that all school

shareholders contribute to the process of conflict resolution. As Jones (2004) stated that the intervention of the school shareholders with constructive and cooperative comprehension will make the school environment safer and more proper. Stepsis (2003) as it is same in human skills, the fact of being teachable of conflict resolution is the sign that all school shareholders can help to the solution of the conflicts experienced in school.

When the studies which have been conducted regarding conflict management in education institutions are examined, it has been seen that these studies (Özmen & Aküzüm, 2010; Yürür, 2009; Iordanides & Mitsara, 2014; Arslantaş & Özkan, 2012; Kırçan & Bostancı, 2012; Toytok & Açıkgöz, 2013; Türnüklü, 2005; Akgün, Yıldız, & Çelik, 2009; Karakuş & Çankaya, 2009; Yıldızoğlu & Burgaz, 2014; İnandı, Tunç, & Gündüz, 2013; Serin, Balkan, & Soran, 2014; Shabbir, Atta, & Adil, 2014; Konak & Erdem, 2015) generally focus on the strategies of conflict solution used by school management. Yet, teachers also may have experience conflict with the other school shareholders concerning individual differences, the way of doing things, the attitude of the school management. However, the studies conducted regarding the conflict strategies teachers used are in limited availability (Güllüoğlu, 2013; Dağlı & Sığı, 2014). In this research, depending on teachers' perception and views, the reasons for conflict experienced in the school and the strategies of conflict resolution strategy they used have been examined. In addition, any study conducted with mixed method concerning conflict management in education institutions in literature has not been observed. In this context, this study is different from other studies and contributes to literature.

2. Methodology

The research has been constructed according to a mixed method. If the researcher has an opportunity to reach qualitative and quantitative data, it is the most ideal approach (Creswell, 2013). In this regard, explanatory design in which quantitative data and then qualitative data are firstly gathered has been used (Fraenkel & Wallen, 2006). The object of using both research methods together aims get more comprehensive and detailed information and to make reliable and correct assumptions.

The qualitative part of the research is one of the descriptive studies based on relational screening model that is general screening models. According to Karasar (2011) relational screening model is a research model that aims to determine the covariance and grade among two or more variables. In this regard, the reasons for conflicts experienced in school and conflict resolution methods used according to variables such as gender, the state of education and age have been examined.

Case design has been used in the qualitative part of the research. The aim of the qualitative case study is to present the results concerning certain cases. The basic characteristic of the study is to analyze the some cases through participants' observations and interviews or through gathering documents (Yıldırım & Şimşek, 2011). In this context, the reasons for conflicts experienced in school and the strategies conflict resolution used has been examined with the open-ended questions

2.1 Study Group

In the quantitative part of the research, the study group includes 216 teachers who are selected randomly and work in 22 secondary schools in the city center of Sivas. Demographic information concerning teachers who participated in the research has been presented in Table 1.

Table 1. Demographic information concerning teachers (quantitative part)

Variables		Frequency (f)	Percentage (%)
Gender	Female	114	52.8
	Male	102	47.2
The State of Education	Under Graduate	175	81.1
	Post Graduate	41	18.9
Age	Between 21-30	69	31.9
	Between 31-40	101	46.7
	Between 41 and over	46	21.4

In the qualitative part of the research, while determining the participants, the maximum variation sampling method among the purposive sampling methods has been used. Maximum variation sampling method reflects the highest level diversity of individuals that can be part of the problem studied in this sampling with forming a small sampling (Yıldırım & Şimşek, 2011). In this regard while the participants were determining who is selected as sample, the parameters of gender, state of education and age have been taken into consideration. Demographic information concerning the participant teachers has been presented in Table 2 in detail.

Table 2. Demographic information concerning the teachers (qualitative part)

Nickname	Gender	Age	State of Education
P1	Female	27	Under Graduate
P2	Female	41	Under Graduate
P3	Male	36	Post Graduate
P4	Male	51	Post Graduate
P5	Male	42	Under Graduate
P6	Male	31	Under Graduate
P7	Female	28	Post Graduate
P8	Male	29	Under Graduate
P9	Female	36	Under Graduate
P10	Male	27	Under Graduate
P11	Female	25	Post Graduate
P12	Female	26	Post Graduate
P13	Female	25	Post Graduate
P14	Female	35	Post Graduate
P15	Male	31	Post Graduate
P16	Female	42	Under Graduate
P17	Male	34	Under Graduate
P18	Female	44	Post Graduate
P19	Male	34	Under Graduate
P20	Male	48	Under Graduate

2.2 Tools for Collecting Data

The Assessment instrument used in the quantitative part includes three parts: The Scale of Reasons for Conflict (Uysal, 2004) and The Scale of the Conflict Resolution Strategies (Gümüşeli, 1994).

The Scale of Reasons for Conflict was adapted by Uysal (2004) from the study in the banking sector conducted by Canlı (2001). The scale includes 28 expressions and has been prepared according to the five-Likert-type scale system. The scale includes three dimensions such as the way of doing things, individual differences and management. Within the scope of this research, a factor analysis with 183 teachers' participation has been conducted on the scale. 3 articles that have factor load value lower than 30 have been removed from the scale. As a result of the analysis, 3 dimensions have been obtained, and the dimensions have been named as the same as in the origin of the scale. It has been observed that factor load values of the articles vary from 41 to 82. Cronbach Alpha reliability coefficient of the scale in the dimension of the way of doing things has been calculated as 85, personal differences 82, management 91 and totally 88. According to these results, the Scale of the Reasons for Conflict is a scale that has validity and reliability. In the scale there are articles such as "my co-workers work less than me, we cannot agree upon work distribution, the directors grant privilege to some of my co-workers".

The Scale of Organizational Conflict developed by Rahim (1993) was adapted to Turkish by Gümüşeli (1994). The Scale of Organizational Conflict includes 28 expressions, and it has been prepared according to the 5-Likert

-type scale system. The scale has 5 dimensions such as integration, compromise, domination, avoidance and reconciliation strategies. Within the scope of this research, a factor analysis -with 183 teachers' participation- has been conducted on the scale. 2 articles that have factor load value lower than 30 have been removed from the scale. As a result of the analysis, 5 dimensions has been obtained and the dimensions have been named as the same as in the origin of the scale. It has been observed that factor load values of the articles vary from 43 to 78. Cronbach Alpha Reliability Coefficient of the in the dimension of integration scale has been calculated as 91, compromise 83, domination 80, reconciliation 87 and avoidance 90 and totally 95. According to these results, The Scale of Organizational Conflict is a scale that has validity and reliability. In the scale, there are articles such as: "I try to understand the problem with the other party correctly, I consent the other party's wishes, I suggest a mutual compromise to arrive at an agreement".

The qualitative data of the research has been collected through semi-structured interview form. In the process of development of gathering qualitative data, firstly open-ended questions that will be addressed to the participants has been addressed to two teachers who do not take place in the research's working group, it has been shown that the questions are clear and comprehensible according to the results obtained. Furthermore, the questions were subjected to the examination by academic members who are competent of qualitative studies and required corrections have been made. The questions addressed to the participant in the research as following:

- 1-What are the reasons for conflicts experienced in schools depending on the way of doing things? Explain.
- 2-What are the reasons for conflicts experienced in school depending on school management? Explain.
- 3-What are the reasons for conflicts experienced in schools depending on individual differences? Explain.
- 4-With whom do you experience conflict mostly in schools?

In this step, the information concerning the strategies of conflict resolution forming the dimensions of scale of Rahim (1983) such as reconciliation, integration, compromise, domination and avoidance has been given.

- 5-Which conflict strategies do you use while resolving the conflicts experienced with school management?

a-Why do you use these conflict strategies?

- 6-Which conflict strategies do you use while resolving the conflicts experienced with teachers?

a-Why do you use these conflict strategies?

- 7-Which conflict strategies do you use while resolving the conflicts experienced with students?

a-Why do you use these conflict strategies?

- 8-Which conflict strategies do you use while resolving the conflicts experienced with parents?

a-Why do you use these conflict strategies?

2.3 Analysis of the Data

In the qualitative part of the research, while analyzing subproblems of the research, t-test for paired comparison and one-way analysis of variance (ANOVA) for the multidimensional comparisons were used by benefiting from the SPSS.18 program. In the table formed according to the general distribution includes arithmetic average and the number of the participants.

In the qualitative part, face-to-face meetings were held which lasts totally 400 minutes with 20 teachers participated in the research voluntarily. The data recorded on the voice recorder was then transferred to the computer environment. In this regard, content and descriptive analysis methods were used. The aim of the content analysis of Cohen, Manion and Morrison (2007), is to edit, to classify, to compare the data and to draw conclusions from the data; whereas the aim of the descriptive analysis of Altunışık, Coşkun, Yıldırım and Bayraktaroğlu (2001) is to quote directly in order to reflect the views of individuals dramatically. For this purpose, the data has been analyzed in four steps such as data coding, finding the themes, editing the codes and themes, identification explication of findings. The same process has been followed by two participant and codes, categories and themes revealed in accordance with the common views of two participants. These codes, categories and themes were edited and the findings obtained has been identified and explicated. Furthermore, citations have been involved in the descriptive analysis frequently in order to reflect the views of the individuals dramatically. Nicknames like (P1, P2, P3, ... P20) was given to participants.

In the qualitative research, the reliability of the descriptive and the content depends on particularly the coding process. One of the most important characteristics of the categories that required bearing is that it should so clear that the same document used for the same purpose by another researcher can reach almost same results

(Tavşancıl & Aslan, 2001). All data obtained during research process has been evaluated, separated coded by another researcher- except the researcher himself- and reached to the agreement. In the research, for the reliability calculation of whole codes was used the reliability formula $\text{Reliability} = \frac{\text{Agreement}}{(\text{Agreement} + \text{Disagreement})}$ put forward by Miles and Huberman'ın (1994). In each reliability calculation for each question, the results between 83% and 89% have been obtained.

3. Findings

In this part, quantitative and qualitative findings will be presented under a different title. As it has been described in the research method, the questions addressed to the teachers in the qualitative part have been structured such that they describe and support the findings.

3.1 Quantitative Findings

In the quantitative part of the research, teachers' perceptions regarding the reasons for conflicts experienced in school and their conflict resolution strategies will be firstly presented. Next the findings regarding gender, state of education and age variables will be presented.

According to the perception of the teachers, the way of doing things is at first rank among the reasons for conflicts in school. Individual differences and management dimensions succeed it respectively. When the data obtained concerning resolution strategies are examined, it is seen that the most common resolution strategy used by teachers is reconciliation Integration, avoidance; and compromise and domination succeed this respectively. It is striking that the avoidance precedes reconciliation strategy in the ranking. In the qualitative part concerning this result, more detailed analyzes have been carried out. The perception of teachers regarding the reasons for conflict and resolution strategies used has been presented in Table 3.

Table 3. The general distribution of teachers' perception regarding the reasons for conflict and conflict resolution strategies used

	n	\bar{x}	ss
<i>The reason for conflict (Total)</i>	216	3,55	,48
The way of doing things	216	3,96	,54
Individual differences	216	3,81	,45
Management	216	3,30	,74
<i>Conflict resolution strategies (Total)</i>	216	2,95	,62
Integration	216	3,04	,91
Reconciliation	216	3,68	,78
Compromise	216	2,52	,86
Avoidance	216	2,85	,74
Domination	216	2,35	,80

When the research findings are examined according to variables of gender, the state of education and age, it has not been realized that there is any significant difference between teachers' perception of each three variable. The fact that the teachers have similar perceptions shows that all teachers are affected by conflicts experienced in the school environment. Since there are no significant differences, variables as mentioned earlier hasn't been mentioned in this research.

3.2 Qualitative Findings

In accordance with the views of the participants, the qualitative findings of the research have been collected under 9 themes. The theme titles are 1) Teachers' views regarding conflicts stemming from the way of doing things, 2) Teacher views regarding conflicts stemming from the individual differences, 3) Teacher views regarding conflicts stemming from school management, 4) Teacher views regarding conflicts experienced with school shareholders, 5) Teacher views regarding conflicts experienced between teachers and students, 6) Teacher

views regarding conflicts experienced between teachers and managements, 7) Teacher views regarding conflicts between teachers and students, 8) Teacher views regarding conflicts experienced between teacher and parents.

3.2.1 Teachers' Views Regarding Conflicts Stemming from the Way of Doing Things

According to the views of the participants, using classrooms ranks first among the reasons for conflicts stemming from the ways of doing things in school. Respectively, not coming to class on time, the duty of watching, the differences between teaching lessons, social activities and school discipline succeeds it. Participants stated that classrooms are used in a day by different teachers, the classroom order are changed every time the teachers come there, the classrooms got dirty, even the board is not cleaned up. In this regard, Participant P3 stated that: *"The classroom where we do our job. Thus, it has to be always proper and clean. However, some irresponsible teachers are using the classrooms as if it only belonged to him. Therefore, we experienced conflict with some of my colleagues."* Participant P11 stated that: *"There have been conflicts experienced concerning not coming to class on time. We earn money by (teaching). Some of our colleagues go to classroom very late and he/she revokes students learning right. I do not approve of staying silent in this situation and I say what is needed."*

Some participant stating that the duty of watching is extremely important for the safety of the school expressed that some teachers do not obey the rules of duty of watch. In this regard, participant P7 said: *"I was watching outside in break time. I saw that a teacher fell and get injured seriously. I waited for the teacher who is responsible for watching to come for a while nobody arrived. I had to help. I could not remain indifferent when I saw that the teacher was having a cup of tea and I discussed with him."* The participant thinks that conflicts arising from the differences of teaching a lesson, social activities and disciple of student depend on that the teachers cannot develop a common behavior policy regarding similar cases. Even, the teachers that want to show him/her up, use inconsistent methods for providing student discipline and does not comply with the program about teaching the lessons causes conflicts. The reasons for conflict depending on the way of doing things are presented in Figure 1.

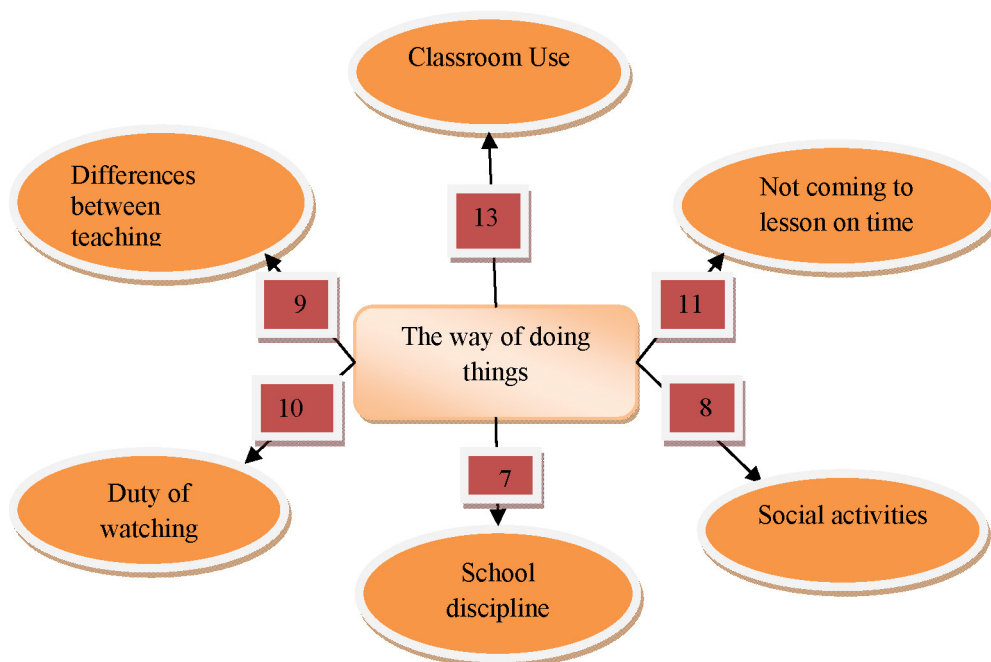

Figure 1. The reasons for conflicts stemming from the way of doing thing

3.2.2 Teachers' Views Regarding Conflicts Stemming from Individual Differences

According to views of participants, syndicate activities ranks first among the conflicts depending on individual differences. Political views, cultural differences, different perspectives regarding education system, personality structure, and gender succeed it respectively. Teachers stated that conflicts occur time to time between the teachers who have different syndicates and political views, they emphases that as long as this situation does not

harm school, this conflict should be considered normal. On this subject, Participant P14 expressed that: *“I cannot tolerate when I hear sentences regarding my syndicate or political view and I start discussing. While everybody is supposed to respect each other about this subject, I don’t approve of this kind of bullying in the school environment. I say my piece but anyone gives up his opinions. So, we hurt each other in vain.”* Teachers stating that there are teachers coming from every part in the school where they work, they sometimes experience conflict depending on cultural differences. In these subject participant P6 emphasizes that: *“Sometimes, some of my colleagues’ speech, behaviors, habitude, traditions irritate me. Next thing you know that they started kidding my food culture/food way. The fact that we do not come from the same culture does not give them right for kidding my values. Then I defend my own culture and conflict occurs unavoidably.”*

The participants who stated that conflicts occur often concerning the country’s education system expressed that considering the reason for every conflict experienced in the schools is education system means evading responsibility. Some of the participants stated that personality structure and gender factors cause time to time conflicts. In this subject, the participant P17 said: *“we come from male-dominant culture. Even if being a woman can mean that we are wrong. Therefore, we feel obliged to defend ourselves more often”*, while the Participant P20 underlined the personality structure and stated: *“Our personality is formed according to hereditary factors and experiences. Some of us are introvert while some of us are unpermissive, some of us are fun and experiencing the conflicts in such an environment where different people are present is, of course, normal.”* The reasons for conflicts stemming from individual differences is presented in Figure 2.

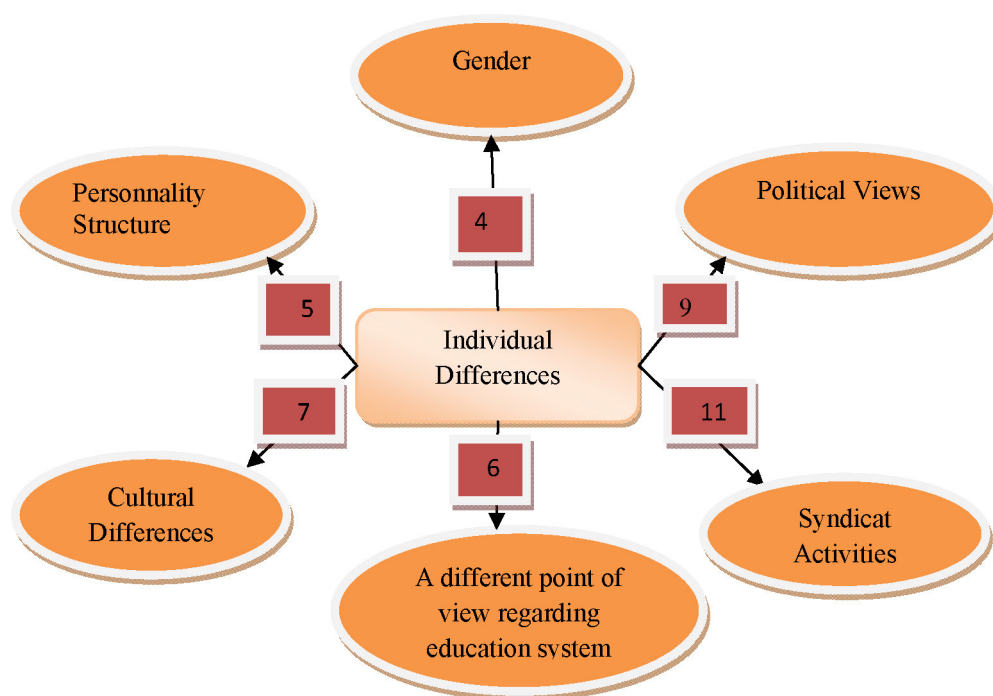

Figure 2. The reasons for conflicts stemming from individual difference

3.2.3 Teachers’ Views Regarding Conflicts Stemming from the School Management

According to the views of the participants, communication problems rank first among the reasons for conflicts stemming from the school management. Respectively, not having executive training, lesson program, work distribution, control activities and not supporting innovations succeed this. The participants who stated that they are having communication problems with managers, they attribute this subject to that managers are incapable of communicating, they are not asking opinions of teachers for the decisions regarding school and people are gossiping too much in school. In this subject, the Participant P9 expressed that: *“I find the managers unsuccessful regarding communication. For example, a duty was assigned to me regarding parents outside the school and I learned this accidentally from another teacher. I do not understand why this kind of decisions is taken without asking me. As a result, I refused the duty and, of course, I had conflict with the management.”* In this subject, the participant P18 said that: *“Our new managers were working as teachers with us as recently as*

yesterday. It is not possible to understand this. If you select people according to their political view and syndicates to which they are a member- instead of their qualification- you assign the one who is not qualified for school management. If my manager expects respect from me, he/she is required to have more experience than me.”

The participants attribute conflicts experienced concerning the lesson program and work distribution to the unfair attitudes of managers. In this subject, the participant P5 expressed that: while the duties are distributed in the meeting *the easiest duties were assigned to the teachers who are close to the management. So, I do not fulfill these duties properly and I am having a conflict with the management* while the Participant P2 underlined his experience similarly that: “*While I teach 18 lessons and I have no free day, my colleague teach 24 hours but he/she has a free day. This and this kind of unfair implementations face off us against the managers.*” The participants who criticize that school management use control activities as to put pressure on them stated that bureaucratic affairs are carried out with controls and controls do not contribute to education and training. In this subject, the participant P1 stated that “*I expect from my school manager to take measures so as to increase my training and education success among the control activities. However, the only question addressed to me: ‘Are your documents full?’ When I transmit my demands regarding this subject, unfortunately, I am labeled as a bad teacher at once.*” The reasons for conflict arising from school management have been shown in Figure 3.

Figure 3. The reasons for conflict stemming from school management

3.2.4 Teachers' Views Regarding School Shareholders with Whom They Experience

The managers have the first rank first in the school shareholders with whom teachers experience conflict. Respectively, students, teachers and parents succeed. The findings concerning the subject are shown in Figure 4.

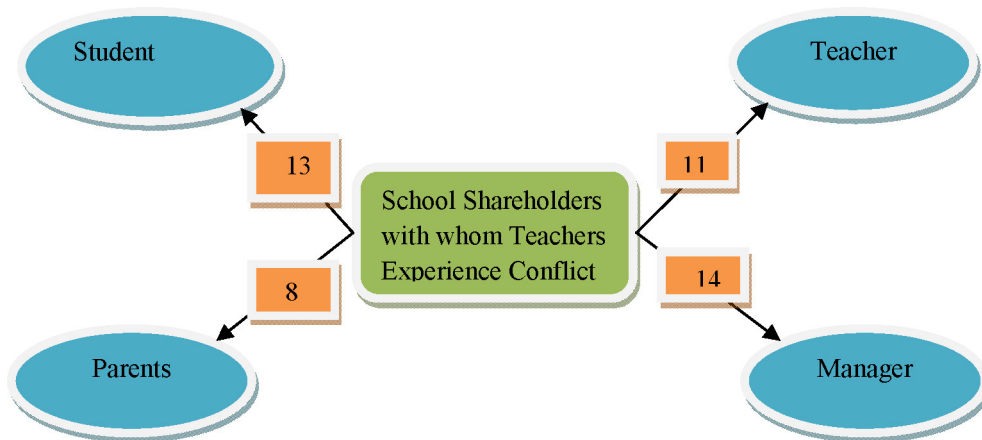

Figure 4. The shareholder of school with whom teachers experience conflict

3.2.5 Teachers' Views Regarding Conflicts Experienced with Teachers and Managers

For the resolution of conflicts experienced between teacher and managers, teachers use respectively avoidance, reconciliation, compromise, integration and domination. Using the strategy of avoidance mostly may be attributed to the superior-subordinate relationship between manager and teacher. While the participant P19 expressed in a manner of verifying this determination that: *"When I conflict with the managers, I prefer avoiding without conflicting. Since experiencing conflict with the manager means disturbing my peace in the following days"*, The participant P1 stated that: *"I prefer avoiding conflicting with the managers since I have difficulty in expressing myself and whatever I say, they continue as they know."* The participant P8 having selected the reconciliation strategy said that: *"All in all, the managers also are humans; he/she got damaged from the conflict as much as I get damaged. I am always trying to find a compromise with my managers."* The participant P13 who prefers avoidance and integration strategy said: *"I always consider that conflict with the managers is a waste of time. If they do not show empathy to understand, I do not want to belabor and accept to behave the way that they want"*. The participant P17 making explanation regarding domination underlined: *"I am not afraid of conflicting with managers. If necessary, I defend my rights through legal channels but I do not resign myself to them."* The distribution of the conflict strategies used by teachers in the conflicts which are experienced between teacher and manager has been presented in Figure 5.

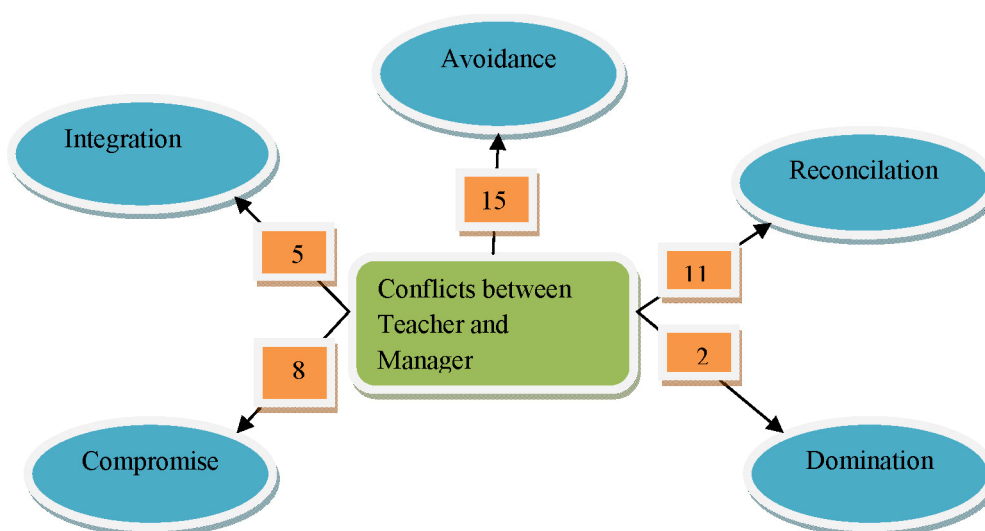

Figure 5. The distribution of the conflict strategies used by teachers in the conflicts which are experienced between teacher and manager

3.2.6 Teachers' Views Regarding Conflicts Experienced between Teachers and Managers

For the resolution of conflicts experienced between teacher and teacher, teachers use respectively reconciliation, integration, domination and compromise and avoidance strategies. Using the strategy of avoidance mostly may be attributed to being in equal position. While the participant P10 expressed in a manner of supporting this that: *"I can resolve the conflicts with my colleagues through reconciliation. In the end, we do not have difficulty in understanding each other since we do the same job."* The participant P12 who selected the integration strategy said that: *"I can act to my (friend) colleague friendly with whom I spend all day in school and I share regarding whatever the problem is and I make effort to understand her."* The participant who used domination strategy stated: *"Yes, he is my colleague if necessary, I struggle until he accepts my opinion."* The participant P9 who finds avoidance strategy closer to herself expressed that: *"It is not convenient that teachers experience conflict. This situation decreases our success. Therefore, it is necessary to avoid conflicts."* The Participant P3 who selected compromise strategy expressed that: *"we have to be an example for students. Therefore, I resolve conflicts that I experience through compromising so that they do not get affected negatively from the experiences."* The distribution of conflict strategies used by teachers for the conflicts experienced between teacher and teacher is shown in Figure 6.

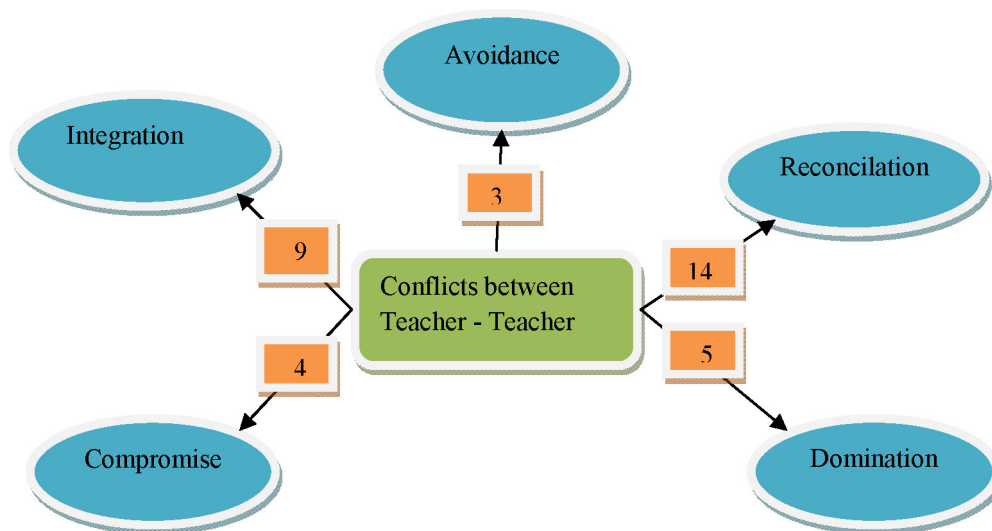

Figure 6. The distribution of conflict strategies used by teachers for the conflicts experienced between teacher and teacher

3.2.7 Teachers' Views Regarding Conflicts Experienced between Student and Student

For the resolution of conflicts experienced between teacher and student, teachers use respectively domination, reconciliation, integration, avoidance and compromise strategies. Preferring mostly the strategy of domination by teachers may be evaluated as clamping down on teachers. In this subject, the Participant P5 stated that: *"It is very difficult to manage students of the new generation. Therefore, in order to disciple students, it is necessary that authority shows its power. It needs to implement a deterrent force."* The participant P7 who dwells on reconciliation strategy said: *"If you understand needs and expectations of students, it may be possible to reconcile with them. Otherwise, the relationship between teacher and student turns into a struggle."* The participant P7 who made an explanation about the integration strategy stated that: *"Sometimes, I put them into my children's shoes. Thus, I can find how to treat them."* The participant P12 and P13 stated that experiencing conflicts harm both the teacher and the students thus, expressed similar opinions regarding that if it is necessary to avoid conflict, the strategy should be compromised. The distribution of conflict strategies used by teachers for the conflicts experienced between teacher and student is shown in Figure 7.

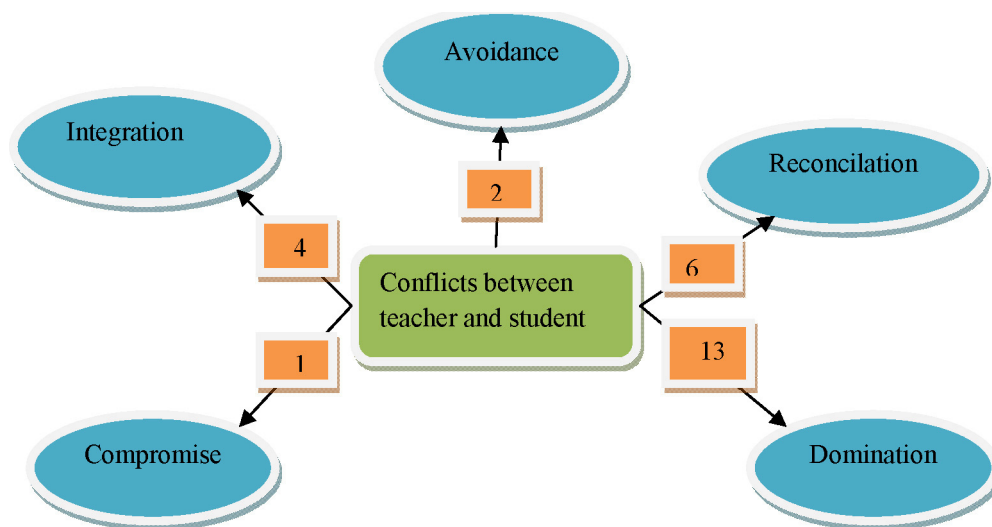

Figure 7. The distribution of conflict strategies used by teachers for the conflicts experienced between teacher and student

3.2.8 The Views Regarding Conflicts Experienced between Teacher and Parents

For the resolution of conflicts experienced between teacher and parents, teachers use respectively avoidance, reconciliation, compromise, dominance and integration strategies. Using the strategy of avoidance mostly may be evaluated as a result of that they abstain from parent complaints. In this subject, while the participant P7 expressed that: *"I try to avoid conflicting with parents since laws and regulations stand with students and parents rather than the teacher. In the case of a slight complaint of a parent, you can be indicated that"*, the participant P14 who prefers reconciliation strategy explained: *"Parent-teacher communication is very important for the success of the student. Thus, I think that reconciliation with parents will increase both my success and student's success."* The participant K20 stated regarding integration strategy that: *"as a parent also, I try to understand parents and show empathize with them."* However, the Participant P14, *"the relationship between teacher and parents is very important for student's success. Thus, I think that reconciliation with parents increases both student's success both my success."* The participant P20 who selected compromise strategy stated that: *"Parents behave bravely in terms of seeking his/her rights and they are tiring to suppress teacher. It is quite difficult to persuade them concerning their children. Therefore, I act upon their claims;"* the Participant P17 stated about integration strategy: *"As a parent also, I am trying to understand them and show empathy. I do my best remove the problems by taking their support."* The conflict strategies used by teachers for conflicts experienced between teacher and parents have been shown in Figure 8.

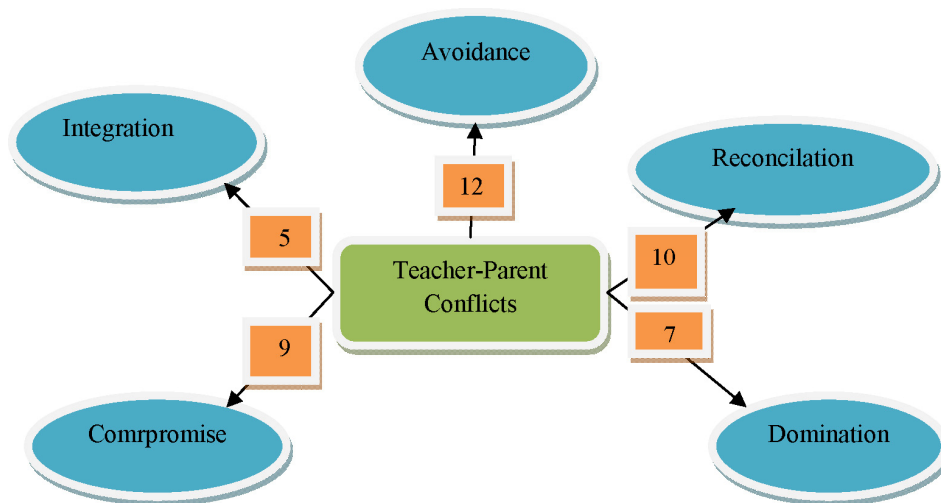

Figure 8. The distribution of conflict strategies used by teachers for conflicts experienced between teacher and parent

4. Discussion and Conclusion

According to the quantitative findings, the way of doing things in school ranks first among the reasons for conflicts experienced in school. Individual differences and management dimensions succeed respectively. Qualitative data has been obtained from open-ended questions for the explanation of the reasons and scale dimension of conflicts. In this context, according to the qualitative findings obtained regarding reasons for conflicts, the reason for conflicts stemming from the way of doing things are respectively use of classrooms, not coming to class on time, the duty of watching, the differences between teaching lessons, social activities and school discipline. The reasons for conflicts stemming from individual differences are found as syndicate activities, political views cultural differences, different perspectives on the education system, personality structure, and gender. Also, the reasons for conflict stemming from school management are communication problems, not getting executive training, lesson program, work distribution, control activities and not supporting innovations. According to Sarpkaya (2002), the human is in the input, process and output of educational organizations, Thus, the reasons for conflicts experienced in educational organizations vary with the human factor.

In this context, the reasons for conflict occurring in school may be expressed as different expectations and perspectives of school shareholders (Miller & Leyden, 1999), cultural values (Özmen & Aküzüm, 2010), personality characteristics (Yürür, 2009), having roles of ethnical origin, socio-economic status, gender (LaGour & Tissington, 2011), teachers' different strategies preferences for resolving discipline problems (Basit, Rahman, Jumani, Chishti, & Malik, 2010), managers' communicational and empathy skills (Arslantaş & Özkan, 2012), providing safety in school and duties of watching (Dönmez, 2001), syndicate activities (Yaşan, 2012), different political views (Kepenekçi & Nayır, 2014), unfair behaviors of school managers (Akgeyik, 2015), teachers' not coming to class on time (Dönmez & Cömert, 2012), being manager without having manager training (Ada, 2000), not supporting innovations by school management (Ezgi & Bülbül, 2012). The different study results taking place in the literature are such as to support these research results. Presentation of these results in an article forms stronger parts of this study.

When the quantitative data obtained regarding conflict strategies, it is seen that the most used strategy by teachers is reconciliation. Avoidance, integration, compromise and domination succeeds respectively this. While Güllüoğlu (2013) states in his research that teachers' conflict strategies are respectively reconciliation, dominance, integration, comprised and avoidance, Dağlı and Sığırı (2014) stated that teachers prefer mostly integration and reconciliation conflict resolution strategy. As it is seen, the studies carried out concerning teachers' conflict resolution strategies are quite limited. In the literature, conflict resolution strategies are perceived as an argument used by managers mostly. Therefore, studies conducted focus on mostly conflict management strategies used by school managers. Yıldızoğlu and Burgaz (2014) expressed that conflict management strategies against conflicts differ between in a situation and other situation. However, it is seen that school managers use mostly reconciliation and integration strategies (Özmen & Aküzüm, 2010; Akgün, Yıldız, & Çelik, 2009; Özmen, Aküzüm, & Aküzüm, 2011; Kırçan & Bostancı, 2012; Atay, 2001; Konak & Erdem,

2015; Toytok & Açıkgöz, 2013). The fact that while school managers use mostly reconciliation and integration strategies, according to this research results teachers prefer avoidance after the reconciliation and according to research results of Güllüoğlu (2013), teachers use first reconciliation and then avoidance strategy and according to research result of Güllüoğlu (2013) prefers firstly reconciliation and then domination shows that school managers and teachers have different preferences concerning their conflict resolution strategy. The reason for this difference may also be attributed to the absence of superior of school manager in school and to teachers' having both superior and subordinate. The qualitative findings of the research support this evaluation as well.

The conflict resolution strategies have been structured according to the school shareholders where teachers experience conflicts. Accordingly, the parties with which conflict experienced are respectively managers, students, teachers and parents. It is seen that teachers use mostly avoidance and reconciliation for the conflicts experienced with managers, teachers use mostly domination and reconciliation strategies for conflict experienced with students, they use mostly reconciliation and integration strategies for conflicts experienced with teachers, they use reconciliation and compensation strategies for conflicts experienced with parents. According to these results, it may show that teachers' conflict resolution strategies vary according to the position of the party with which the conflict experienced. Türnüklü (2005) expressed that student, teacher and manager views become different from each other regarding school managers' conflict resolution and tactics. In the research of Özgan (2011) reaching the result of being significant, positive and in the mid-range relation between teachers "conflict management strategies and their perception of management assessment reveals that teachers' preferences may vary.

According to the result of this research, it is seen that there is not any common resolution policy in schools. The findings of Türnüklü, Şahin and Öztürk (2002) concerning that there is not any common binding all people conflict resolution language and policy, and findings of Hakvoort and Olsson (2015) concerning teachers does not have any special knowledge, skill and any support for this subject take place in the literature. In this regard, acting as a team on conflicts (Sharma, 2014), supporting conflict resolution education and positive behaviors (Lane-Garon, Yergat, & Kralowec, 2012; Koçak & Başkan, 2013; Nelson, Shechter, & Ben-Ari, 2014) and using positive (Larusso & Selman, 2011), constructive, integrating (Trinder, Wertheim, Freeman, Sanson, Richardsons, & Hunt, 201) and cooperative resolution strategies (Freeman, Wertheim, & Trinder, 2014; Jones, 2004), using drama strategy for conflict resolution (Chinyowa, 2013) will make learning environment in school more proper.

The suggestions regarding the research have been structured through "conflict management model in school" which is formed by benefiting research findings and literature. The model has been presented in Figure 9.

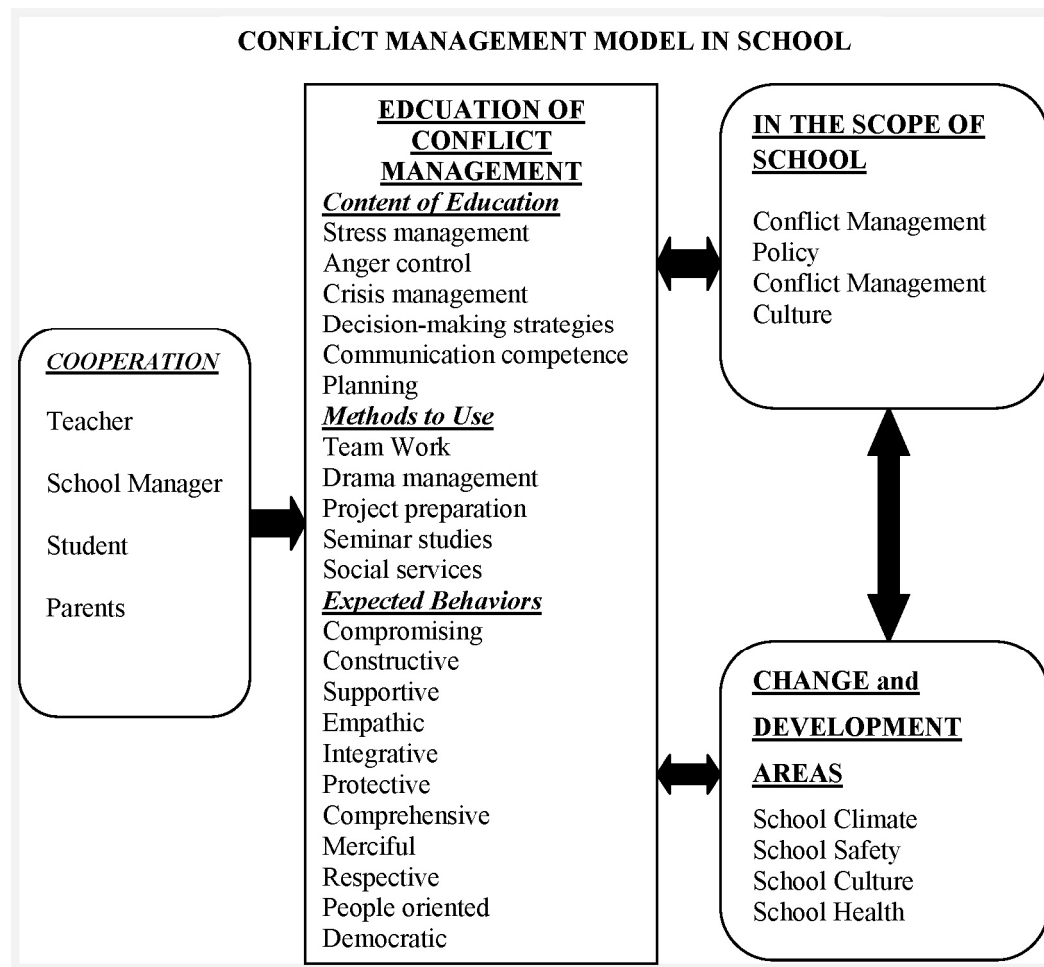

Figure 9. Conflict management model in school

Forming of conflict management from learnable behaviors forms the main idea of the model. Conflict management model first requires the cooperation of school shareholders. Conflict management education in school is set with the voluntary participation of school shareholders. The Content of the education includes stress management, anger control, crisis management, decision-making strategies, communication competence and planning. Education methods to be used include teamwork based on experience, drama management, Project preparing, seminar studies, and social services. Acquisition of these behaviors provides conflict management policy and conflict management culture in school. The behaviors that have turned to policy and culture provide development and change of school climate, school safety, school culture, school health. The school shareholders who are affected by this change and development will be able to carry out studies of higher quality regarding conflict management.
